Multimodial conversational agents: A framework for evaluating multimodal integration by humans and a role for embodied conversational agents Dominic W. Massaro October 2004 Proceedings of the 6th international conference on Multimodal interfaces Publish as ACM Proces
Publisher: ACM Press Full text available: pdf(217.84 KB) Additional Information: full citation, abstract, references, index terms
One of the implicit assumptions of multi-modal interfaces is that human-computer interaction is significantly facilitated by providing multiple input and output modalities. Surprisingly, however, there is very little theoretical and empirical research testing this assumption in terms of the presentation of multimodal displays to the user. The goal of this paper is provide both a theoretical and empirical framework for addressing this important issue. Two contrasting models of human informatio

 UPi: a software development process aiming at usability, productivity and integration Kenia Sousa, Elizabeth Furtado, Hildeberto Mendonça October 2005 Proceedings of the 2005 Latin American conference on Human-computer interaction CLIHC '05 Publisher: ACM Press

Full text available: pdf(449.49 KB) Additional Information: full citation, abstract, references

This paper presents the definition of a software development process (SDP) that integrates practices from Software Engineering (SE) and Human-Computer Interaction (HCI) with three main goals. First, we intend to help professionals from both areas in developing interactive systems with usability. Second, we want to make HCI an essential part of SE processes by facilitating the communication between professionals from these two areas, thus, bringing productivity to a new working environment. Third ...

4 Integrating usability engineering into the computer science curriculum: a proposal

Evelyn P. Rozanski, Nan C. Schaller

June 2003 ACM SIGCSE Bulletin, Proceedings of the 8th annual conference on Innovation and technology in computer science education ITiCSE '03,

Volume 35 Issue 3 **Publisher:** ACM Press

Full text available: pdf(323.26 KB) Additional Information: full citation, abstract, references, index terms

The authors propose a model for incorporating usability engineering into the undergraduate computer science curriculum using an example curriculum from an accredited undergraduate computer science program in the United States. This model proposes that human-computer interaction and usability engineering concepts be integrated throughout the computer science curriculum rather than treated as disjoint topics.

Keywords: HCI, usability engineering lifecycle, user-centered design

Full text available: pdf(299.37 KB) Additional Information: full citation, abstract, references, index terms

Exposure to state-of-art industry technologies, tools and practices by students provide CS/IT graduates highly desirable skills and marketability. A key expectation of the industry from their new cadre is a speedy integration into the business environment resulting in productive work. This usually requires having a sound technological background, a maturity to assess the environment and adapt quickly, and highly-developed soft skills to be productive in a team environment. Incorporating such exp ...

12	Taxonomy of effortless creation of algorithm visualizations Petri Ihantola, Ville Karavirta, Ari Korhonen, Jussi Nikander October 2005 Proceedings of the 2005 international workshop on Computing education research ICER '05 Publisher: ACM Press Full text available: pdf(341.20 KB) Additional Information: full citation, abstract, references, index terms The idea of using visualization technology to enhance the understanding of abstract concepts, like data structures and algorithms, has become widely accepted. Several attempts have been made to introduce a system that levels out the burden of creating new visualizations. However, one of the main obstacles to fully taking advantage of algorithm visualization seems to be the time and effort required to design, integrate and maintain the visualizations. Effortlessness in the context of algorithm vis Keywords: algorithm visualization, effortlessness, interaction

John L. Berg

November 1976 ACM SIGMOD Record, ACM SIGMIS Database, Volume 8, 8 Issue 4, 2

Publisher: ACM Press

Full text available: pdf(9.95 MB) Additional Information: full citation, abstract

What information about data base technology does a manager need to make prudent decisions about using this new technology? To provide this information the National Bureau of Standards and the Association for Computing Machinery established a workshop of approximately 80 experts in five major subject areas. The five subject areas were auditing, evolving technology, government regulations, standards, and user experience. Each area prepared a report contained in these proceedings. The proceedings p ...

July 1995 ACM SIGCHI Bulletin, Volume 27 Issue 3

Publisher: ACM Press

Full text available: pdf(5.14 MB) Additional Information: <u>full citation</u>, <u>abstract</u>, <u>citings</u>, <u>index terms</u>

This work gives an overview of a new technology that is attracting growing interest in public as well as in the computer industry itself. The visible difference from other technologies is in the use of a pen or pencil as the primary means of interaction between a user and a machine, picking up the familiar pen and paper interface metaphor. From this follows a set of consequences that will be analyzed and put into context with other emerging technologies and visions. Starting with a short historic ...
